

PROJECT REPORT

Team ID	PNT2022TMID48527
Project Name	Skill / Job Recommender Application

1. INTRODUCTION**1.1 Project Overview :**

To provide the right and plenty of opportunities to the fresher's and experienced candidates. We have come up with a skill recommender solution through which the fresher or the skilled person can register, log in, and find jobs with our help according to their ability, skill level, and knowledge. In this process, we are going to help them in both a human-centered way and by using technology. Further will be discussed below.

1.2 Purpose

To provide equal and appropriate job/skill recommendations to all the people with their ability, skill level, and knowledge consideration. We are not going to filter the candidates based on our machine-analyzed data that the candidate entered in the resume or wherever. Because we found that many peoples said they are not getting the right recommendations for jobs and skill enhancement courses. So, we are approaching this problem in a more human-centric way to get the data, processing, and recommend skills and jobs. We are merging both technology and human in the right proportion to solve the real human problem.

2. LITERATURE SURVEY**2.1 Existing Problem**

How might we recommend jobs for people's specific skills or interests and vice-versa? In the job searching world, Job description's explanation, advertising, and selection criteria aren't the same during college and after college. It is entirely different. People are facing many practical issues when they searching jobs after their college days. As we are going to provide a different kind of job description alone will create a positive hopeful impact for fresher as well as experienced candidates. By this, we can satisfy both the fresher and experienced candidates who are all searching for jobs. As we are going to find the skills of the people through both the direct and indirect approach, we are able to get and find the right skill level for the people. In addition, we can get more insights about them. This creates a more positive impact and customer satisfaction in using our service and this is the existing problem to solve.

2.2 References

S.NO	TITLE	AUTHOR & YEAR	DESCRIPTION	OUR LEARNINGS
1.	Job Recommendation System Using Profile Matching and Web Crawling	Deepali V Musale, Mamta K Nagpure, Kaumudini S Patil, Rukhsar F Sayyed May 2016.	The first type of recommendation is done through web portal by using keyword based search and second type of recommendation is done through profile matching and sending notification to the students. Thus proper job recommendations are provided to the students.	<ol style="list-style-type: none"> 1. They use the more logical way approach. 2. Getting completely detailed information - Compare profiles - Recommendation.
2.	Enhanced Job Recommendation System.	Shivraj Hulbatte, Amit Wabale, Suraj Patil, Nikhilkumar Sathe Oct 2018	On the basis of this study, research and after implementation of algorithms, the collaborative filtering based algorithm is considered for its better performance and overall factors. Of course a lot of improvement and hybrid algorithms need to be implemented alongside collaborative filtering algorithm.	<ol style="list-style-type: none"> 1. Started with similar approach that we have now for recommendation, but ended up with the statements of default sayings.

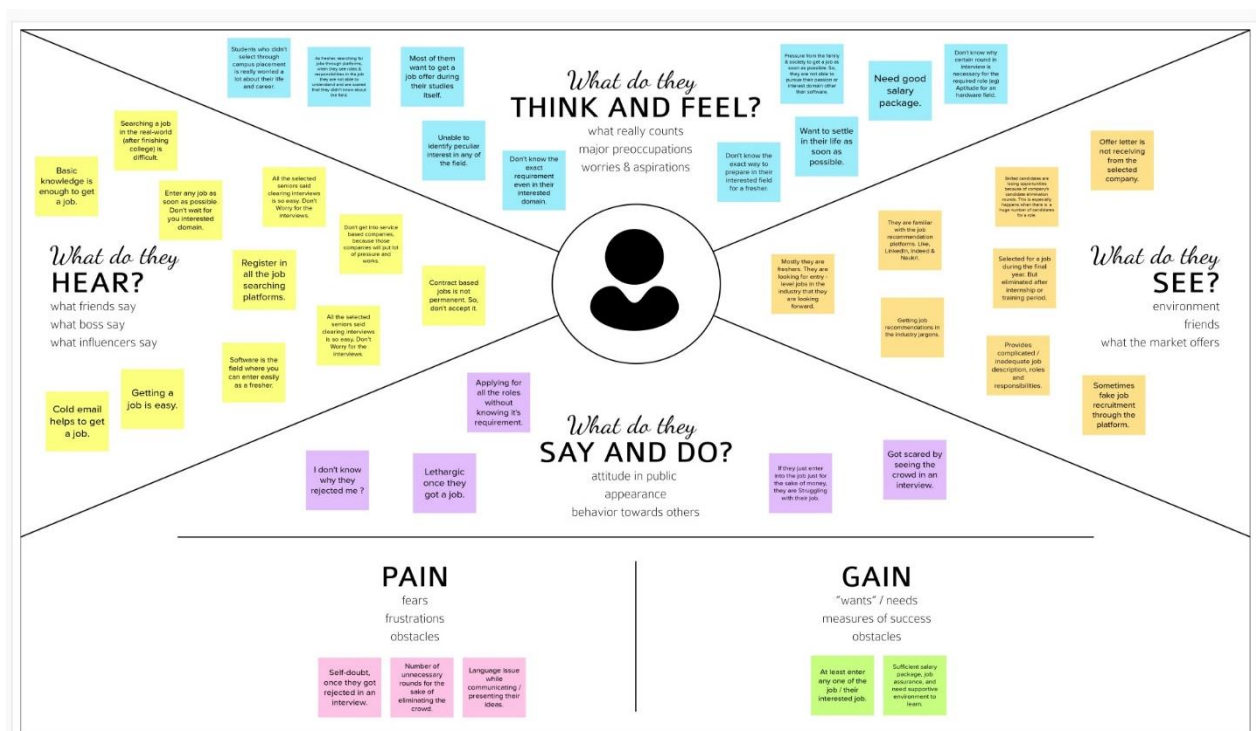

3.	Job Recommendati on based on Job Seeker Skills: An Empirical Study.	Jorge Valverde- Rebaza, Ricardo Puma, Paul Bustios, Nathalia C. Silva March 2018.	In this paper, proposed a framework for job recommendation task. This framework facilitates the understanding of job recommendation process as well as it allows the use of a variety of text processing and recommendation methods according to the preferences of the job recommender system designer.	1. Collect the profiles & job offers through sites and compared with the relatively large number of keywords through certain text processing methods.
4.	A survey of job recommender systems.	Shaha T. Al- Otaibi1*, Mourad Ykhlef2 Aug 2012	This survey shows that several approaches for job recommendation have been proposed, and many techniques combined in order to produce the best fit between jobs and candidates.	1. Got an general overview about job recommendation systems and realized lot to learn. 2. Got new concepts or ideas for our project. Have to explore it.

2.3 Problem Statement

1. Hariharan is a final year ECE student who needs a job in his core field because he needs to uplift his family with his earnings but he doesn't have any idea about the industry roles & requirements available to pursue.
2. Saravanan is a BSc graduate, completes a course in UIUX Design Fundamentals, who wants to work as a User Researcher so that he can gain more knowledge about the user centered design approach.
3. Abdul loves to draw paintings, who wants to get a job in design industry, but he don't know the right job for him so that he can't lead a happy personal and career life.
4. Shalini is a diploma graduate who wants to get into the field of software testing but she doesn't know what are the right courses to complete so that she can get a job in that field.
5. Murugan is a BSc graduate who knows to write essays, blogs and so-on, who wants to work in an well reputed company environment but he doesn't know the right job category for him to pursue.

3. IDEATION & PROPOSED SOLUTION

3.1 Empathy Map Canvas

3.2 Ideation & Brainstorming

3.3 Proposed Solution

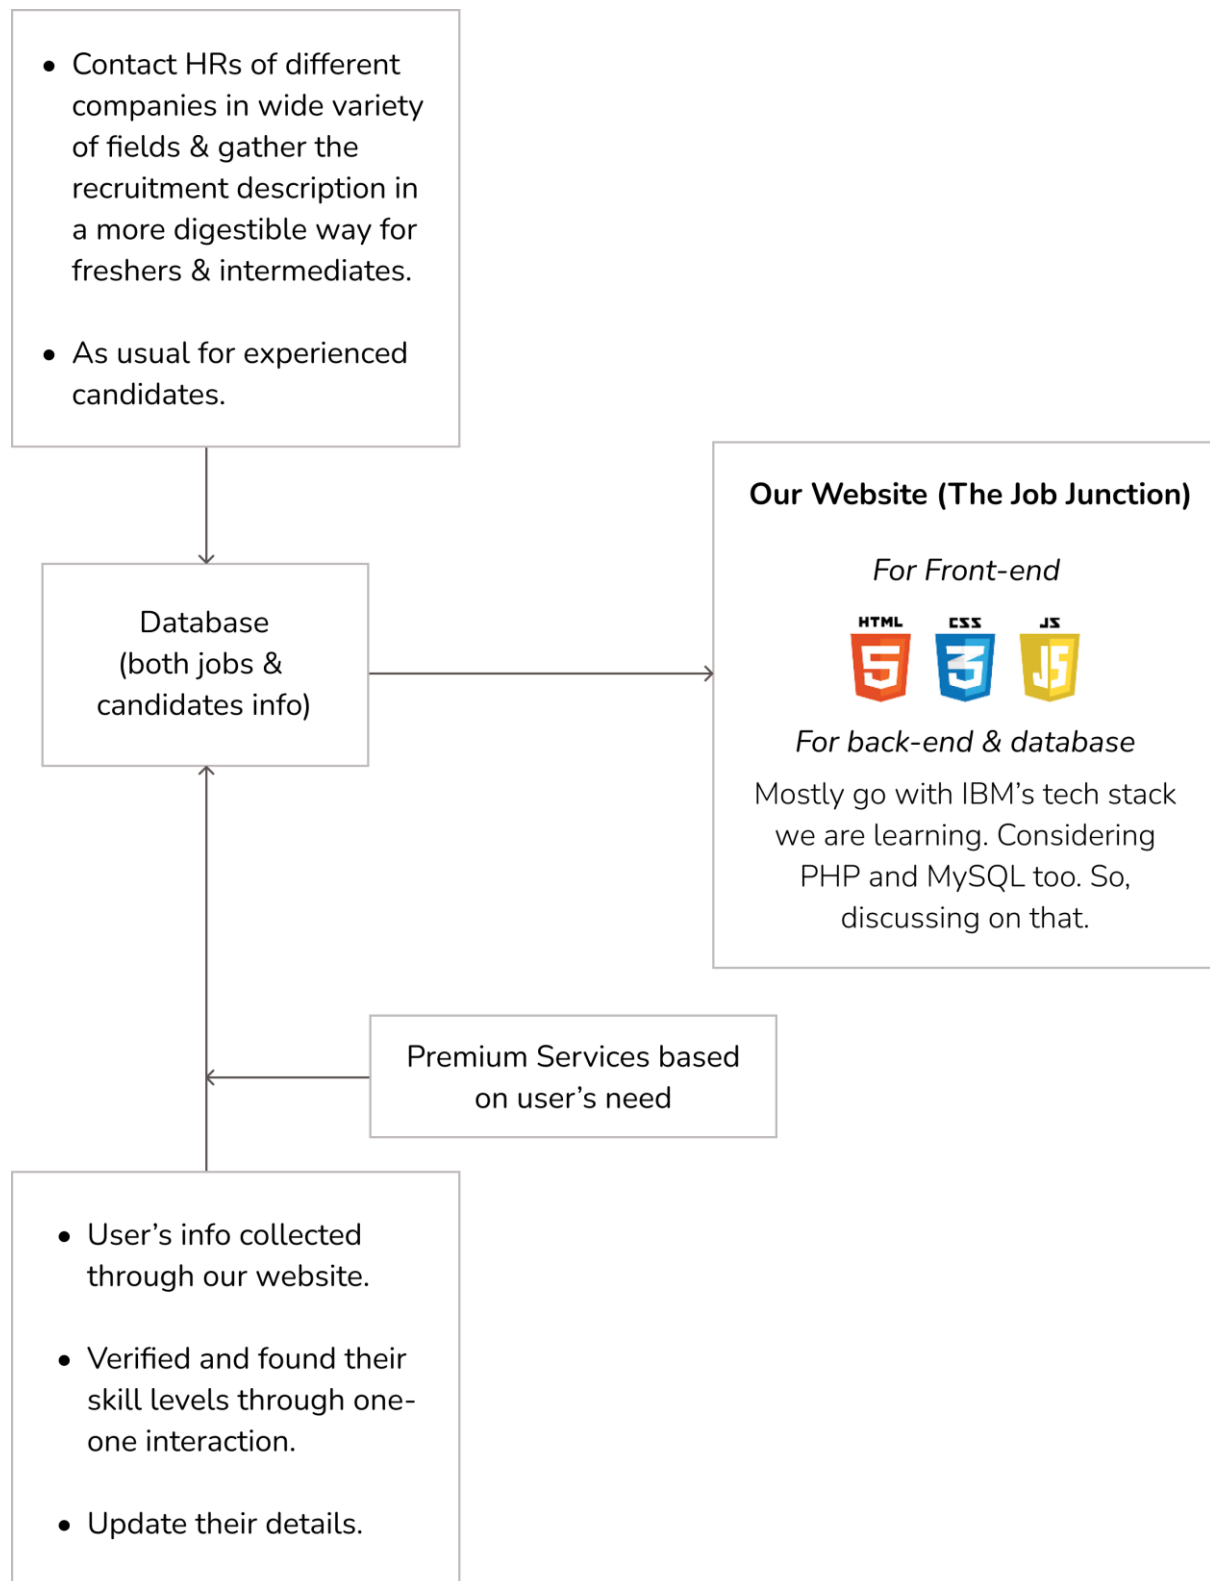

S.No.	Parameter	Description
1.	Problem Statement (Problem to be solved)	How might we recommend jobs for people's specific skills or interests and vice-versa?
2.	Idea / Solution description	Specific public campaigns for grouping people based on their skills, Asking recruiters not to put detailed descriptions and asking them to put the skills they want. Based on user requests, show the job vacancies that mostly match with user skills.
3.	Novelty / Uniqueness	We are not going to filter the candidates based on our machine-analyzed data that the candidate entered in the resume or wherever. Because we found that many people said they are not getting the right recommendations for jobs and skill enhancement courses. So, we are approaching this problem in a more human-centric way to get the data, processing, and recommend skills and jobs. We are merging both technology and human in the right proportion to solve the real problem.

4.	Social Impact / Customer Satisfaction	Job description explanation, advertising, and selection criteria aren't the same during college and after college. It is entirely different. People are facing many practical issues when they searching jobs after their college days. As we are going to provide a different kind of job description alone will create a positive hopeful impact for fresher as well as for experienced candidates. By this, we can satisfy both the fresher and experienced candidates who are all searching for jobs. As we are going to find the skills of the people through both the direct and indirect approach, we are able to get and find the right skill level for the people. In addition, we can get more insights about them. This creates a more positive impact and customer satisfaction in using our service.
5.	Business Model (Revenue Model)	<ol style="list-style-type: none">1. Advertisement commissions by allowing skill development companies and job-providing agencies to promote their business to reach their potential users.2. Premium services like mentor support, exclusive courses, etc...
6.	Scalability of the Solution	We found the core problem among job seekers. Now, we are trying to solve it by simply finding users' skill levels in a more human-centered way and recommending jobs based on their category at all levels. We believed that this idea can be scalable. Because once we achieve/find an implementation approach to our above-mentioned primary task then, <ol style="list-style-type: none">1. It can be expandable by providing offline support along with online.2. End-to-end support for both skills identification, enhancement, job support, and more.

3.4 Problem Solution Fit

Define CS, fit into CC		Explore AS, differentiate	
Focus on CS, fit into CC	1. CUSTOMER SEGMENT(S) College students who are in the stage of applying for jobs. Includes who all are found their interests and not found yet.	6. CUSTOMER CONSTRAINTS Social media distraction, Language barrier and Lack of awareness.	5. AVAILABLE SOLUTIONS 1. Job Seeking & Hiring Platforms: Most popular among professionals. It recommends jobs based on our requirement but not to the fullest. People received their domain based recommendation but it is not fit to their skill levels. Descriptions make them scary. 2. College Placements: People simply attend placement drives without even knowing the detailed description of a job, roles and responsibilities. Aptitude - Coding - Technical interview - HR round. But people outside college (freshers) struggle a lot with the above platform's job description. It occurs generally in the field irrespective of these platforms too.
	2. JOBS-TO-BE-DONE / PROBLEMS 1. Not getting proper job recommendations based on their skill level or proficiency in that particular field. 2. Not find their interests yet to move ahead in their career. 3. Not proper guidance and support for them to lead them in their right path.	9. PROBLEM ROOT CAUSE 1. Job Recommendations aren't based on the people's need fully. It just give outputs for the input. It has to be based deeply with the people's mindset and their skill levels. 2. Job description and placement methodologies aren't same inside and outside the college for fresher. For more (refer AS).	7. BEHAVIOUR 1. Contact their relatives, seniors and friends who works in their interested fields to know about the opportunities, to clear their doubts and for guidance. 2. Googling about the jobs. 3. Trial and error method.
Focus on J&P, fit into BE, understand		Focus on BE, fit into RC, understand	
Focus on BE, fit into RC, understand	3. TRIGGERS 1. College seniors / College's recommendation. 2. Close friends sharing the product. 3. Product in their mother language. 4. Low cost. 5. Testimonials, Reviews, and Achievements.	10. YOUR SOLUTION We found the core problem among job seekers. Now, we are trying to solve it by simply finding users' skill levels in a more human-centred way and recommending jobs based on their category at all levels. We believed that this idea can be scalable. Because once we achieve/find an implementation approach to our above-mentioned primary task then, 1. It can be expandable by providing offline support along with online. End-to-end support for both skills identification, enhancement, job support, and more.	8. CHANNELS of BEHAVIOUR ONLINE 1. Analyzing Job searching platforms. 2. Googling. OFFLINE 1. Contact peoples.
	4. EMOTIONS: BEFORE 1. Self-doubt. 2. Low self-esteem. AFTER 1. Self analysis (no self doubt). 2. Skill found (high self-esteem). 3. Job recommendation based on their skill level (happy).		

3.5 Solution Architecture

4. REQUIREMENT ANALYSIS

4.1 Functional Requirement

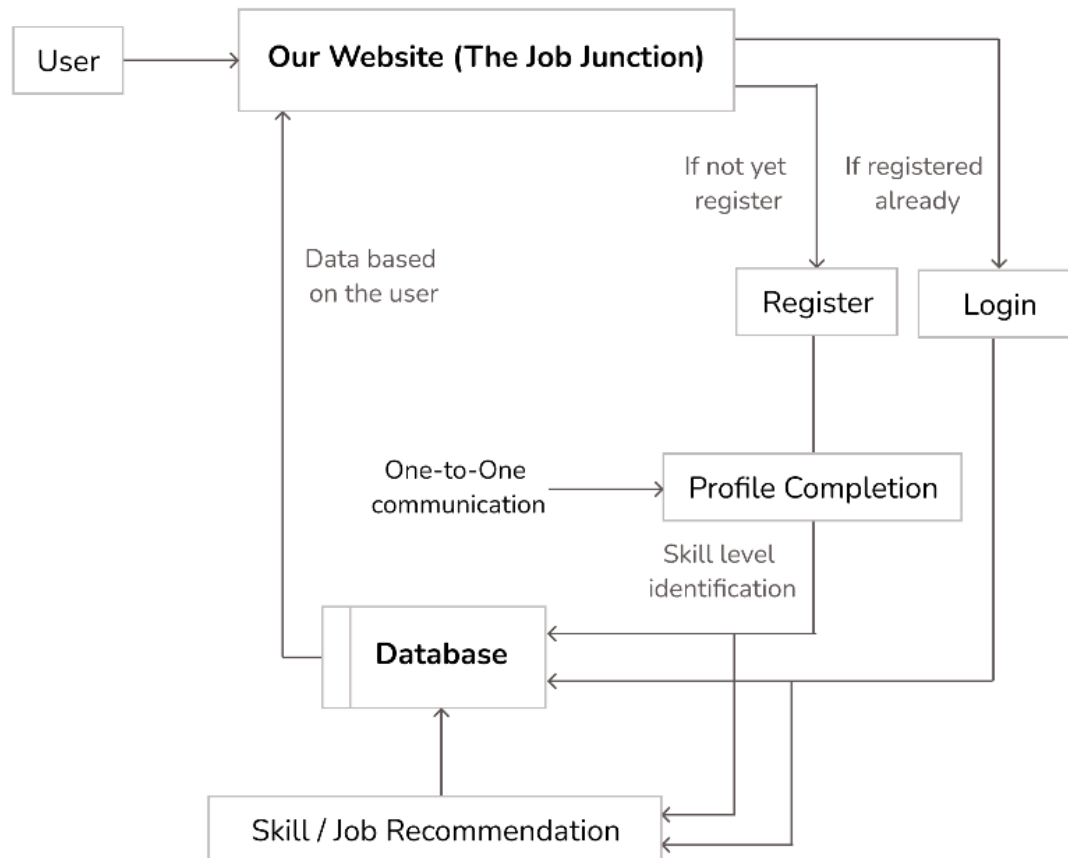

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	User Registration	Registration via Form on our website.
FR-2	Profile Completion	User will create their profile with their basic personal details, we will call them in person to know their educational background, skill levels, and their goals to provide them with better service. The gathered details will be stored and displayed in their profile section.
FR-3	User Login	Users can log in with either their Email or Phone number.
FR-4	Job / Skill Recommendation	Based on their profile, we will recommend them appropriate jobs with courses to learn if needed. Will be notified through Email and Our Website.

4.2 Non-Functional Requirement

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	Right now, we are focusing on the target users (fresher and college students) without any special considerations. We will definitely make it usable for all kinds of people in the future.
NFR-2	Security	Basic form validations will be performed to avoid harmful injections and also to get meaningful information.
NFR-3	Reliability	We are planning to serve 1000 users at a time in the initial stages.
NFR-4	Performance	Mobile responsive website.
NFR-5	Availability	Planning to provide customer support during office hours 9-5.
NFR-6	Scalability	In addition to this, we can provide career guidance programs, job fairs, native language support, and premium services like personalized mentoring, coaching, and so on in the future.

5. PROJECT DESIGN

5.1 Data Flow Diagrams

5.2 Solution & Technology Architecture

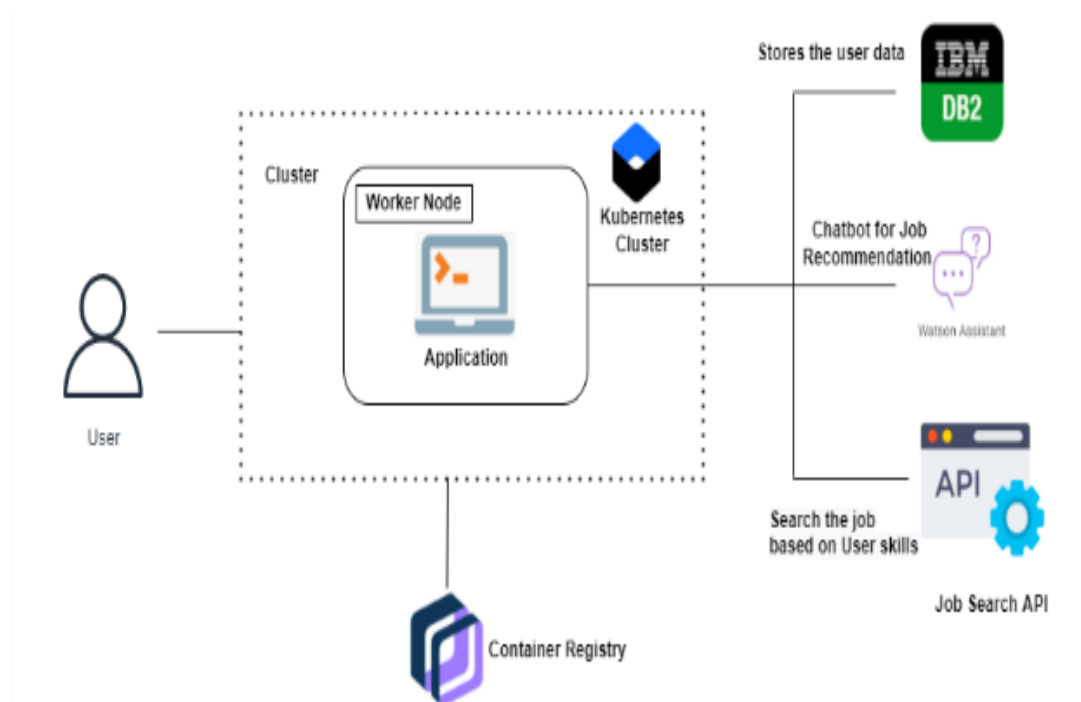

Table-1 : Components & Technologies:

S.No	Component	Description	Technology
1.	User Interface	Front-end of our platform was developed using these technologies.	HTML, CSS (flexbox) and JavaScript
2.	Application Logic-1	Displaying the web pages based on the criteria.	Python
3.	User Onboarding	Welcoming users inside the website using IBM Watson Assistant.	IBM Watson Assistant
4.	Database	Queries for fetching the required details.	MySQL.
5.	Cloud Database	Database Service on Cloud	IBM DB2.
6.	File Storage	File storage requirements	IBM Block Storage.
7.	Infrastructure (Server / Cloud)	Application Deployment.	Kubernetes.

Table-2: Application Characteristics:

S.No	Characteristics	Description	Technology
1.	Open-Source Frameworks	Website developed using these open-source frameworks.	Flask and Bootstrap
2.	Security Implementations	To ensure the valid details are getting from the user.	Input validations and encryption of user's data.
3.	Scalable Architecture	Can be easily scalable, as we are dealing with IBM technologies for implementing our solutions.	IBM DB2, IBM Watson Assistant, and Kubernetes (combined architectures).
4.	Availability	Justify the availability of applications (e.g. use of load balancers, distributed servers, etc.)	None
5.	Performance	By writing optimized code and different techniques, we are trying to provide better and faster performance.	None

5.3 User Stories

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Customer (Mobile user & Web user)	Registration	USN-1	As a user, I can register for the application by entering my name, email, phone number, and password.	I can access to complete my profile.	High	Sprint-1
		USN-2	As a user, I can register through <u>Chatbot</u> .	I can access to complete my profile.	Low	Sprint-4
	Login	USN-1	As a user, I can log into the application by entering email & password.	I can access to see job openings for my skill levels.	High	Sprint-1
	Notification	USN-1	As a registered user, I can get notification for jobs / courses recommendations based on my skills through calls and whatsapp.	I can apply for the jobs or learn the recommended courses.	High	Sprint-2
		USN-2	As a registered user, I can get notification for jobs / courses recommendation through Email.	I can apply for the jobs or learn the recommended courses.	Medium	Sprint-3
	Recommendation	USN-1	As a user, I can view job recommendations or courses to improve myself in the website.	I can apply for jobs or learn skills based on the recommendation.	High	Sprint-1
Customer Care Executive	Contact registered users	CCESN-1	As a customer care executive, I can talk to the registered users to know their skill levels and their interest.	I can complete their profile for job / skill recommendations.	High	Sprint-1
Administrator	Monitoring the user on boarding	ASN-1	As an administrator, I monitor whether a user complete his profile once he registered.	I can make sure each and every user has a complete profile for further processes.	High	Sprint-1

6. PROJECT PLANNING

6.1 Sprint Planning & Estimastion

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
Sprint-1	Registration	USN-1	As a user, I can register for the application by entering my name, email, phone number, and password.	8	High	Kavin, Sunilprasad, Nithish, Govindaraj
Sprint-4		USN-2	As a user, I can register through Chatbot.	1	Low	Govindaraj
Sprint-1	Login	USN-1	As a user, I can log into the application by entering my email & password.	5	High	Kavin, Sunilprasad, Nithish, Govindaraj
Sprint-2	Notification	USN-1	As a registered user, I can get notifications for jobs/course recommendations based on my skills through calls and WhatsApp.	1	High	Kavin, Sunilprasad, Nithish, Govindaraj
Sprint-3		USN-2	As a registered user, I can get notifications for jobs/course recommendations through Email.	1	High	Kavin, Sunilprasad, Nithish, Govindaraj
Sprint-1	Recommendation	USN-1	As a user, I can view job recommendations or courses to improve myself on the website.	3	Medium	Kavin, Sunilprasad,

Sprint	Functional Requirement (Epic)	User Story Number	User Story / Task	Story Points	Priority	Team Members
						Nithish, Govindaraj
Sprint-1	Contact registered users	CCESN-1	As a customer care executive, I can talk to the registered users to know their skill levels and their interest.	2	High	Kavin, Sunilprasad, Nithish, Govindaraj
Sprint-1	Monitoring the user onboarding	ASN-1	As an administrator, I monitor whether a user completes his profile once he registered.	1	High	Kavin, Sunilprasad, Nithish, Govindaraj

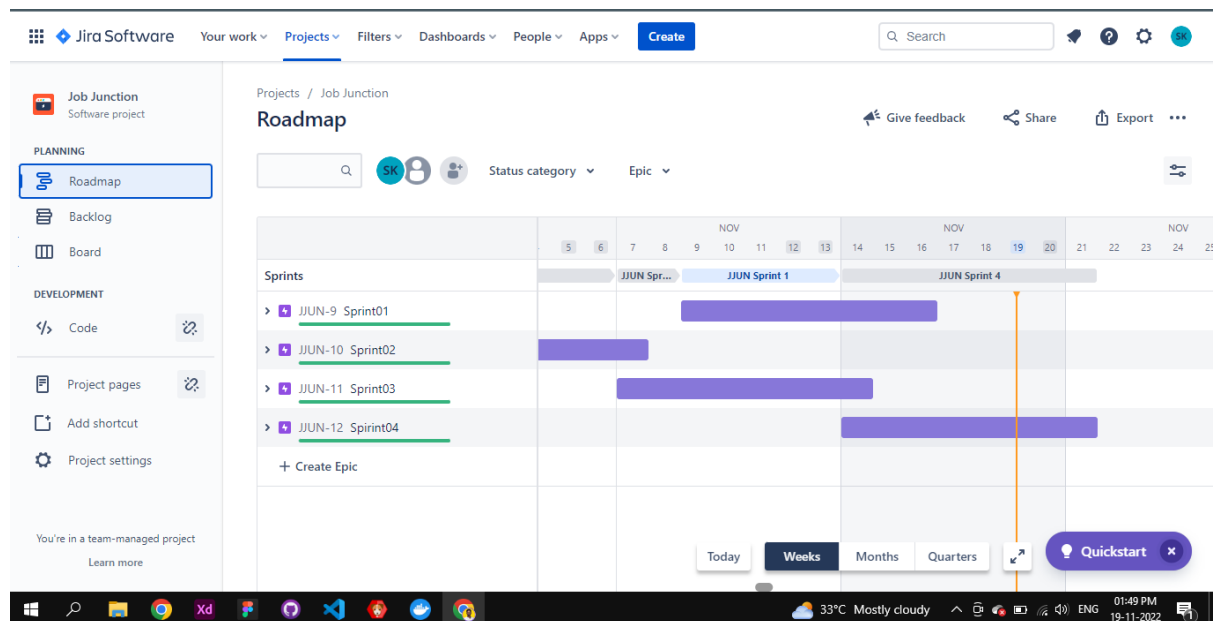

6.2 Sprint Delivery Schedule

Project Tracker, Velocity & Burndown Chart: (4 Marks)

Sprint	Total Story Points	Duration	Sprint Start Date	Sprint End Date (Planned)	Story Points Completed (as on Planned End Date)	Sprint Release Date (Actual)
Sprint-1	19	6 Days	24 Oct 2022	29 Oct 2022	19	16 Nov 2022
Sprint-2	01	6 Days	31 Oct 2022	05 Nov 2022	01	17 Nov 2022
Sprint-3	01	6 Days	07 Nov 2022	12 Nov 2022	01	18 Nov 2022
Sprint-4	01	6 Days	14 Nov 2022	19 Nov 2022	01	19 Nov 2022

8. TESTING

8.1 Test Cases

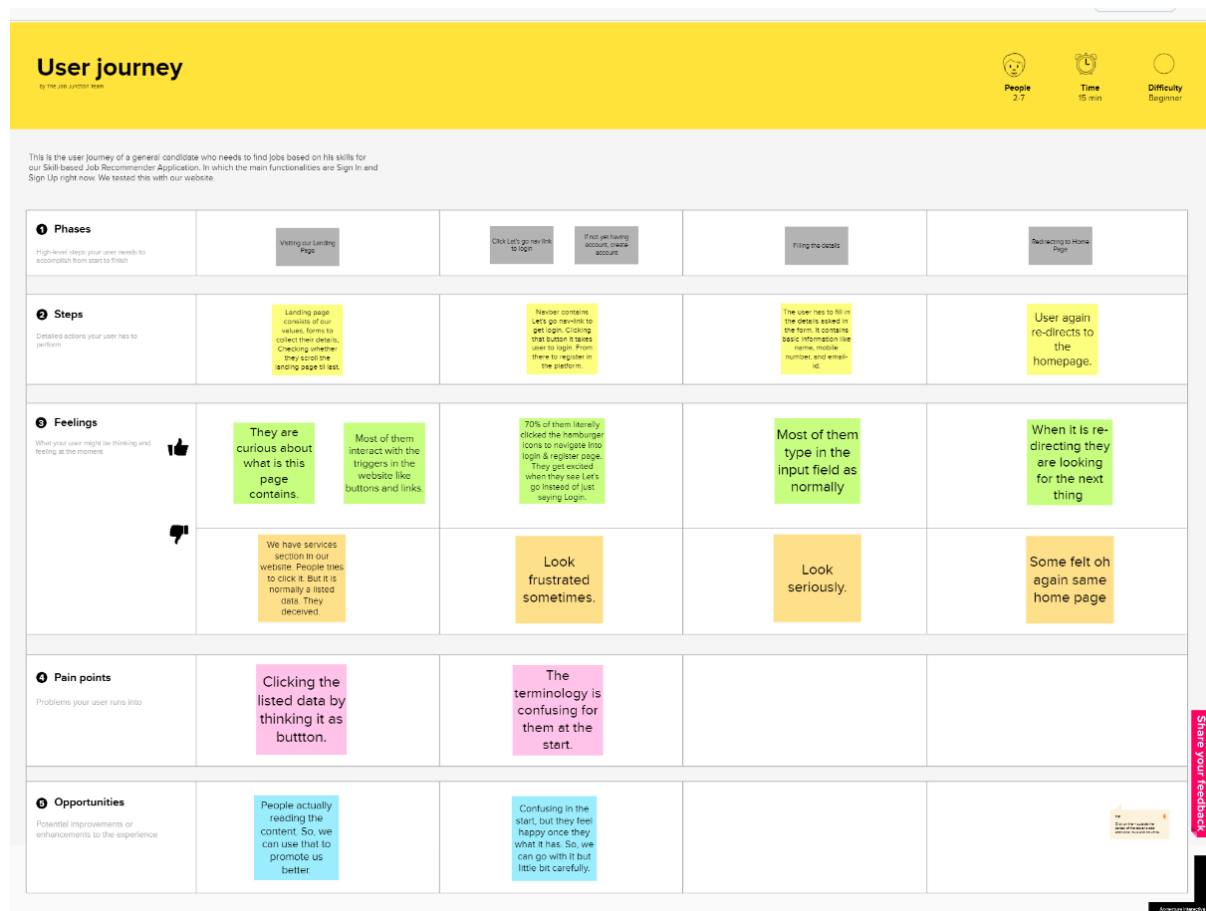

1. Website functionality testing : It includes Outbound links, Internal links correctness, There are no links leading to the same page, There are no broken links.

2. Usability testing : It includes Navigation testing and Content testing.

3. UI (User Interface) testing : It includes Testing with different screen resolutions and Design elements evaluation: layout, colors, fonts, font sizes, labels, text boxes, text formatting, captions, buttons, lists, icons, and links.

4. Performance testing : This is carried out by Lighthouse in the browser.

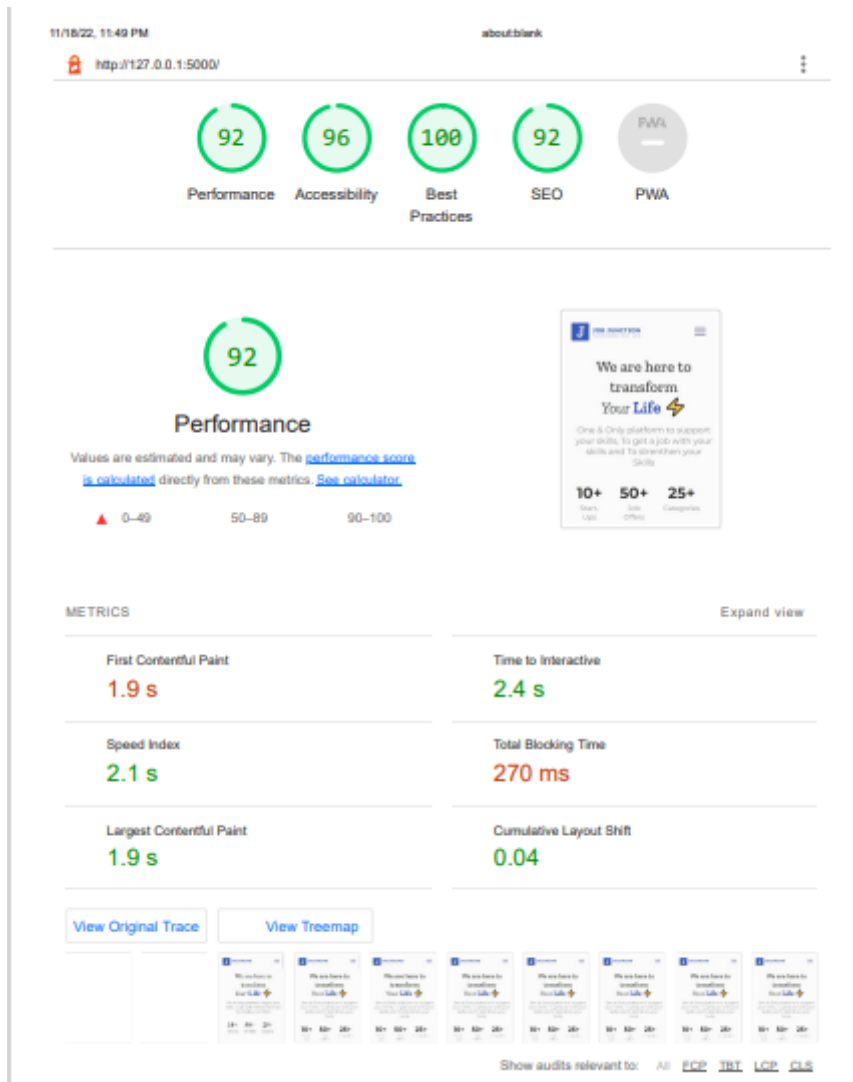

8.2 User Acceptance Testing

We performed this User journey mapping before starting development of our project. We did this with our end users (students of our college). Based on the observations, we did this application.

9. RESULTS

9.1 Performance Metrics

10. ADVANTAGES & DISADVANTAGES

10.1 Advantages

1. Right job/skill recommendations based on their interest, skill level, and expertise in a particular domain.
2. Achieving a Win-Win policy for both job seekers and providers.

10.1 Disadvantages

1. Time consuming process.
2. Tedious process.

11. CONCLUSION

We did our best to our capacity. We did each and every process and task after learning. We actually started it from scratch and come to this level. We learned Project planning and execution along with the development languages like HTML, CSS, Bootstrap, Flask, IBM cloud DB2, Docker, and so on. We are actually planning to take this project idea for our start-up. The above-produced documents are all done by us. Yet to improvise and complete a lot with this project. We strongly believe this idea will great impact on people's life.

12. FUTURE SCOPE

We found the core problem among job seekers which we mentioned in the above existing problem section. Now, we are trying to solve it by simply finding users' skill levels in a more human-centered way and recommending jobs based on their category at all levels. We believed that this idea can be scalable. Because once we achieve/find an implementation approach to our above-mentioned primary task then,

1. It can be expandable by providing offline support along with online.
2. End-to-end support for skills identification, enhancement, job support, and more.
